ART'OP & RFID systems

ART'OP kiosks were designed to meet the demands of Theme, Leisure Parks, Museums and the Cultural sector (gardens, zoos, aquariums, etc.)

A high quality, digital sound system, to be integrated into your custom kiosk.

Audio tracks can start by pushing buttons, automatically, with RFID triggering or synched with other automated devices.

ART'OP is our generic name for a range of audio products that provide flexible audio interpretation, soundbites or sound effects, audio archive material, in fact too many uses to list.

We have many variants from single button chip memory through to multiple sound with full synchronisation to animatronics or other interactives.

Over the years we have produced versions that work outside in wind and rain as well as versions for the indoors.

Just ask us and we are sure to have the right solution to meet your requirements.

OPHRYS Systems

More than 15 years of research and development experience in the Audioguide world.

With more than 40 000 devices installed around the world, we have obtained the experience to create leading audioguide systems.
